AB A method of **preventing** or **reducing** the incidence of
post-operative **adhesions** in or assocd. with a **body**
cavity, comprises introducing into the **body**
cavity a compn. contg. an aq. soln. or suspension or gel
formulation contg. polysaccharide **dextrin**. Preferably, the
compn. is allowed to remain in the **body cavity** for a
min. of 2-3 days and esp. over the period during which fibrin exudation
is
at a max.

AB WO 200152866 A UPAB: 20011113

NOVELTY - Composition comprises an aqueous formulation containing a polysaccharide **dextrin**.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(1) a biocompatible, bioresorbable, non-toxic **adhesion prevention** kit for **preventing** or **reducing** the incidence of **adhesions** in mammals comprises the aqueous formulation; and

(2) products containing the aqueous formulation as a combined preparation for **preventing** or **reducing** the incidence of **adhesions**.

USE - Used for the treatment of **adhesions** formed as a result of an inflammatory response, other than post-operative **adhesions**, and for **preventing** or **reducing** the incidence or **adhesions** in or associated with a **body cavity** such as peritoneum, pericardium or plura and synovial cavities such as joints and tendons in humans or animals. The inflammatory response includes chronic inflammatory conditions such as pelvic inflammatory disease, arthritis, chronic inflammatory bowel disease, ulcerative colitis, Crohn's disease, irritable bowel syndrome and/or acute inflammatory conditions such as those induced by tissue injury, which is as a result of chemical insult.

ADVANTAGE - The composition has a good shelf life. The **dextrin** is non-toxic, cheap and holds fluid in a **body cavity** and can also be readily metabolized within the body. It does not provide any undesired side effects or dependency.

AB WO 9958168 A UPAB: 20000118

NOVELTY - Composition containing the polysaccharide **dextrin** in an aqueous formulation to **prevent** or **reduce** the incidence of post-operative **adhesions** in or associated with a **body cavity**.

USE - The product is used as stated, to **prevent** or **reduce** the risk of post-operative **adhesions** in **body cavities**, including the peritoneum, pericardium, pleura, and synovial cavities for joints and tendons, notably the peritoneum, also for possible **adhesions** after spinal and cranial surgery. For these purposes, the product is conveniently packaged as a

kit

for surgical use in humans (or other animals) containing the

dextrin or derivative as a solution, suspension, or gel.

ADVANTAGE - The **dextrin** is easily water soluble, with good biocompatibility, is metabolizable, and does not cause immunological hypersensitivity, in contrast to prior art dextran used for these purposes. The method is also superior to patch application in the form of films.

AB Balanced pH, hyperosmotic, hypoosmotic, or isoosmotic gels are ideal vehicles for drug delivery. They are especially suited for topical **body cavity** or injection application of drugs or diagnostic agents; for drug or diagnostic agent delivery to the eye of a mammal; as protective corneal shields; or as ablatable corneal masks useful in laser reprofiling of the cornea. The compositions without the addition of a drug or diagnostic agent are useful as medical devices, for instance, in separating surgically or otherwise injured tissue as a means of **preventing adhesions**.
